

**ALEXANDRIA TOWNSHIP TECHNOLOGY CURRICULUM**  
**PHILOSOPHY STATEMENT**

**The vision for technology in Alexandria Township** is to infuse technology into all curriculum areas in order to enhance student learning and to prepare students for a global, technology-based 21<sup>st</sup> Century environment.

**To achieve this vision, the curriculum for technology must** be used to enrich the academic development of students, seamlessly integrating technology into the educational experience. The technology curriculum will expose students to the use of computer applications and tools to conduct research, solve problems, achieve goals and produce products. Students will utilize technology to organize, synthesize and evaluate information for lifelong learning. The Alexandria Township School District technology curriculum will provide students the ability to transfer technological skills learned to new experiences in order to reach solutions.

**We will know we have achieved this vision for curriculum in technology when** students become independent users of technology to solve problems and promote communication skills and self-reliance. It will be evident when we provide a collaborative, active learning environment in all curriculum areas that effectively implement technology.
